DETAILED ACTION

Claim Objections

Claim 18 is objected to because of the following informalities: the term (for new bad actors) in line 1 should be removed. Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 6-8, 16 and 21are rejected under 35 U.S.C. 102(e) as being anticipated by Hsiung et al (US 6,853,920).

With respect to claims 1 and 16, Hsiung et al teaches a method and a system of identifying events in a process comprising: running a principal component analysis model on sensor data from the process (column 63, lines 53+, column 63, table 10, PCA performance); calculating statistics related to the model (column 63, lines 57-59, column 63, table 10, column 70, lines 3-10); determining if an event is occurring (column 63, lines 59-62); and finding a nearest cluster of bad actors related to the event to identify the event (column 19, line 66 to column 20, line 25 and column 62, table 10). It is noted that the term "bad actors" is not defined in the specification of the application. Examiner reminds applicant that

Application/Control Number: 10/826,614 Page 3

Art Unit: 2863

during patent examination, the pending claims must be given the broadest reasonable interpretation.

With respect to claims 6-7, Hsiung et al teach wherein a cluster is limited to a predetermined number of bad actors (tables 5 and 10) and wherein the known events have definitions which are generalized (tables 5 and 10).

With respect to claims 8 and 21, Hsiung et al teach wherein the statistics comprise Q and T2 (table 5).

Allowable Subject Matter

3. Claims 2-5, 9-15, 17-20, 22-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. In combination with other limitations of the claim. The prior art fails to teach wherein finding a nearest cluster of bad actors comprises comparing new bad actor vectors to known clusters in a library of clusters for bad actors; and identifying a sequence of cluster matches; and correlating the sequence of cluster matches to known events; using a feature scoring scheme to identify top contributors of bad actors.

Claim 29 are indicated allowable over the prior art of record because the prior art fails to teach the claimed combination as recited, particularly in combination of: a training module that is run on historical data to create a pool of vectors with values for the variables, wherein the training module further creates clusters of bad actors from the values based on statistics and associates the clusters with known events; and a run time module that receives incoming data from the

sensors, calculates statistics, determines if events are occurring, and identifies clusters to identify events.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bryan Bui whose telephone number is 571-272-2271.

The examiner can normally be reached on M-Th from 7am-4pm, and Alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John E. Barlow can be reached on 571-272-2269. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
